

Rayan Ketata

Software Engineering Co-op Student | Backend, Full-Stack & Data Engineering
Ottawa, ON | 613-618-6735 | rayanketata2@gmail.com | GC Reliability Status | [LinkedIn](#) | [GitHub](#)

Education

University of Ottawa

B.A.Sc. (CO-OP), Software Engineering

Jun 2028

Ottawa, ON

- **Coursework:** Data Structures & Algorithms, Software Engineering, Systems Programming, Database Management, Computer Networks, Object-Oriented Programming

Work Experience

Statistics Canada

Data Analyst Programmer

May 2026 - Dec 2026

Ottawa, ON

- Modernized legacy statistical-processing workflows by converting SAS programs into reusable Python and R pipelines, replacing proprietary implementations with maintainable open-source code and reducing duplicated processing logic across recurring analytical workflows.
- Re-engineered 5+ core processing stages including joins, filters, transformations, derived variables, and validation rules using Pandas, dplyr, and data.table, consolidating fragmented SAS logic into reusable components for downstream analysis.
- Accelerated repeated analytical processing by developing ETL pipelines and Parquet-based intermediate datasets, eliminating redundant data-loading and transformation steps across multi-stage government data workflows.
- Automated SAS-to-R/Python validation across schemas, row counts, calculated fields, and analytical outputs, replacing manual spot-checking with repeatable comparisons that surfaced migration discrepancies before converted workflows were finalized.

Office of the Privacy Commissioner of Canada

Data Analyst

Jan 2025 - Apr 2025

Gatineau, QC

- Automated recurring data-cleaning and validation workflows using SQL and Excel, reducing repetitive manual preparation while improving the consistency of datasets used for operational reporting.
- Developed reusable SQL queries and validation checks to detect duplicate, incomplete, and inconsistent records, shortening recurring data-quality reviews and preventing unreliable records from reaching downstream reporting workflows.
- Standardized raw operational data into quality-checked analytical datasets and reporting summaries, enabling internal teams to identify trends, exceptions, and compliance-related issues without rebuilding analyses for each reporting request.

Projects

SecureLens

2026

- AI Security Assessment Platform; React, FastAPI, PostgreSQL, Python, SQLAlchemy
- Engineered a full-stack AI-assisted cybersecurity assessment platform using React, FastAPI, PostgreSQL, and SQLAlchemy, consolidating 5+ assessment workflows including systems, controls, evidence, findings, risk levels, and progress tracking into one persistent application.
- Designed and implemented 15+ REST API endpoints for systems, security controls, assessments, evidence, file retrieval, and AI analysis, eliminating browser-only state and enabling persistent CRUD operations across the PostgreSQL-backed application.
- Automated security-evidence processing through PDF/TXT ingestion up to 10 MB, combining persistent file storage, metadata tracking, automatic text extraction, preview, download, and deletion into a single assessment workflow.
- Integrated structured LLM-based evidence analysis that converts uploaded documentation into 3 standardized assessment outcomes - Met, Partially Met, or Not Met - while returning confidence, reasoning, supporting evidence, and control gaps for analyst review.

Rentify

2023 - 2024

- Java, Android Studio, Firebase
- Built an Android rental marketplace combining Firebase Authentication, Firestore persistence, and CRUD workflows, centralizing account and listing management through reusable Java/XML components.

Unneed

2023 - 2024

- JavaScript, HTML, CSS
- Developed a responsive service-booking application with interactive forms, account workflows, and reusable front-end logic, delivering a consistent mobile-friendly experience across multiple user-facing pages.

Technical Skills

- **Languages:** Python, Java, JavaScript, TypeScript, C, C++, R, SQL, HTML/CSS, Bash
- **Frameworks / Libraries:** React, Angular, Spring Boot, FastAPI, SQLAlchemy, Pandas, dplyr, data.table
- **Databases / Data:** PostgreSQL, MySQL, Firebase, Firestore, ETL, Parquet, Data Pipelines, Data Validation
- **Tools / Platforms:** Git, GitHub, Linux, Docker, Jenkins, GCP, VS Code, IntelliJ, Android Studio
- **Development:** REST APIs, CRUD, OOP, Database Design, Unit Testing, Agile, AI/LLM Integration

Spoken Languages

-
- English(Fluent)
 - French(Fluent)
